TECH STACK

- **Languages Frameworks:** React, TypeScript, JavaScript, C#, .NET, Node.js, SQL, HTML/CSS
- **Tools Platforms:** Azure (Web Apps, DevOps), Postman, Git, Octopus Deploy, Visual Studio, VS Code
- **Practices:** Full-Stack Engineering, UI/UX Design, Design Systems, End-to-End Testing, Agile (Scrum), CI/CD, Peer Code Review

EXPERIENCE

Software Engineer | Cedaron Medical

Jan 2024 – Present

Davis, CA

- Automated a previously manual harvest process by building a .NET Minimal API with JSON-based scheduling, improving reliability and freeing up 10 staff hours/month.
- Led a dedicated EF Core-based migration project to support clean schema migrations with EF Core, eliminating repetitive manual checks and saving 5 staff hours/month across development workflows.
- Refactored key React front-end components to enhance maintainability, modularity, and performance in a growing code base.
- Built a comprehensive organization management system with user permissions and role-based access controls, supporting secure access and resource visibility across 1,000+ AACVPR-affiliated hospitals in an enterprise SaaS Environment.
- Conducted peer code reviews covering 100% of pull requests for a smaller team and 70% for a larger cross-functional team, providing feedback and mentorship to less-experienced engineers to uphold quality and maintain architectural standards.

Tech stack: React, C#, .NET 9, Entity Framework, JavaScript/Typescript, SQL Server, Azure

Software Engineer | ClearCompany

August 2021 – 2024

Remote

- Refactored existing front-end code from Backbone.js to React components and optimized Redux code with modern React Hooks.
- Successfully implemented customer-facing features such as bulk-texting, text-templates, and self-scheduling services, significantly increasing user adoption and sales.
- Implemented webhook-driven support for AI-generated text templates with simulated typing animations.
- Coordinated and executed monthly production deployments using Octopus Deploy, ensuring smooth CI/CD delivery with minimal downtime.
- Provided prompt bug fixes for high-priority tickets and offered direct customer service support when necessary.

Tech stack: React, C#, .Net 6, JavaScript/TypeScript, Backbone.js, MySQL, Octopus Deploy

Software Engineer | Alarm.com

May 2021 – July 2021

Remote

- Designed and developed a report system that automatically pulled and stored third-party property management data, detecting discrepancies between internal and third-party data.
- Created internal Postman endpoints to integrate Yardi and RealPage APIs to automate and enhance Quality Engineering testing efficiency.

Tech stack: React, C#, Ember.js

Full-Stack Developer | Infinity Energy

January 2020 – May 2021

Rocklin, CA

- Led the development of the company's internal CRM, including refactoring, UI/UX design, and database restructuring.
- Designed and implemented a new interface for scheduling and tracking service requests, integrating with Outlook Calendar API , integrating with Outlook Calendar API
- Collaborated with the HR department to spearhead the development of a human resources information system, leading to substantial cost savings by replacing a third-party system.

Tech stack: HTML/CSS, JavaScript, C, .Net Core, SQL Server, PHP, MySQL

EDUCATION

B.S. in Computer Science | [University of California, Davis](#)

📅 September 2016 - December 2019

📍 Davis, CA

- Relevant Courses: Web Programming, Human-Computer Interaction, Operating Systems, Algorithm Design, Data Structures and Programming, Software Engineering, Object Oriented Programming, Programming Languages, Computer Architecture, Machine Dependent Programming
